

# CASE STUDY

Renewance's extensive knowledge of the battery recycling industry greatly contributed to the success of our latest battery replacement project. Dave and his team went above and beyond, easily and effortlessly addressing changes to the project scope of work, shipping/transportation requirements, and schedule as they were experienced. Their professionalism and easygoing demeanor has earned my business for any future endeavors, regardless of the complexity.

**Eric Askew, PMP**

Service Solutions Manager, S&C Electric Company

**Project:** Battery recycling project for SDG&E's Borrego Springs microgrid project

**Background:** S&C needed to dispose several end-of-life Kokam NMC battery modules which had been deployed at San Diego Gas & Electric's Borrego Springs microgrid project.

**Renewance's approach:** Renewance offered a turnkey battery recycling project management solution. Renewance arranged adequate transport packaging and labelling for the batteries, prepared required hazardous goods transport paperwork, contracted a licensed logistics company for universal waste transport and contracted a reputable recycler. S&C could track project progress through the Renewance Manager™ portal and access and store the relevant documentation in order to remain compliant with record retention requirements.

**Outcome for S&C:** S&C had no burden on its resources for coordinating the multitude of vendors involved with the decommissioning, packaging, logistics and recycling by outsourcing this to Renewance. S&C could monitor progress through Renewance Manager™ portal. All relevant documents subject to record retention requirements are stored and accessible to S&C in the same portal.
